

Cooke Aquaculture sends more boats to help flooded communities

April 26, 2019

BLACKS HARBOUR, N.B. – Cooke Aquaculture has diverted three more boats and marine staff from its Charlotte County fish farming operations to help with flood relief efforts in Grand Bay-Westfield and the City of Saint John in New Brunswick.

This is in addition to the two boats the local, family-owned company already sent to the Village of Cambridge-Narrows on the Washademoak Lake this week. The motor boats are all 21-25 feet long, equipped with safety equipment and are run by trained Cooke Aquaculture operators accompanied by local first responders.

The New Brunswick Emergency Measures Organization (NBEMO) has advised the public that water levels have yet to reach their highest levels in a number of communities along the southern regions of the St. John River basin. And that residents living near the St. John River system should continue to exercise extreme caution and remain alert to rising water levels over the coming days.

“We encourage people to follow the Emergency Measures Organization advice to avoid boating, kayaking or other water activities this time of year as currents are strong and may carry debris,” said Joel Richardson, Vice President of Public Relations with Cooke Aquaculture. “In last years flood our boats retrieved everything from half-submerged building materials, gas cans, and tires to propane tanks from the water. People should stay away from the rivers and lakes until it is safer.”
